Information Management

## **Introduction**

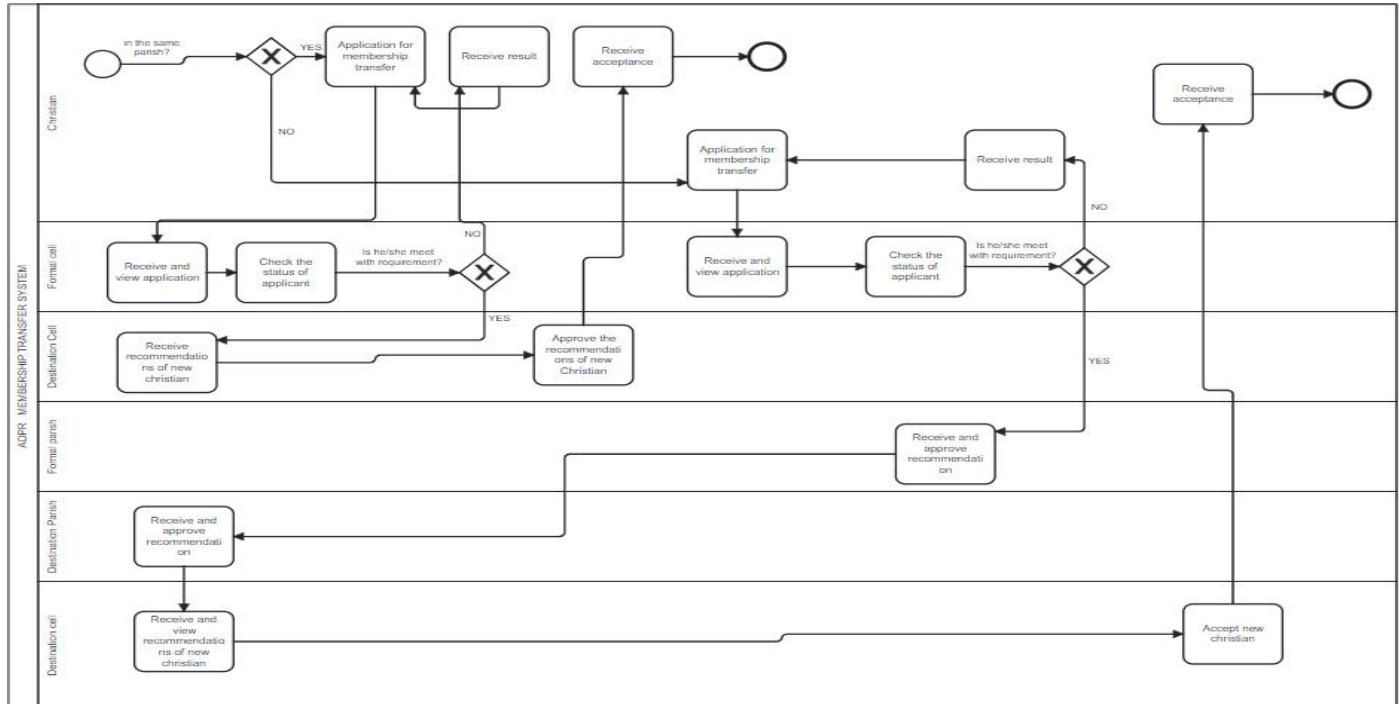

The Association of Pentecostal Churches in Rwanda (ADEPR) is a Christian organization that is committed to promoting the teachings of the Bible and advancing the gospel of Jesus Christ in Rwanda. ADEPR is a community of believers who are united in their faith and share a common vision of serving God and their community.

Recently, ADEPR has introduced a membership transfer program to allow members who have moved from one church location to another to transfer their membership seamlessly. This program is designed to help members maintain their spiritual connection with the church and avoid the difficulties of having to go through the membership process again.

The membership transfer process is straightforward and involves filling out a transfer form and submitting it to the new church. Once the transfer request has been approved, the member can participate in all church activities, including communion and other sacraments. This program is an excellent opportunity for members to continue their spiritual journey with their fellow believers and to contribute to the growth and development of the church.

In conclusion, the introduction of the membership transfer program by ADEPR is a positive step towards ensuring that members remain connected to their church even when they relocate to a different location. This program will help to strengthen the bond between members and their church, and promote the growth and development of ADEPR as a community of believers.

## Modeling the Current membership transfer system

**Figure 1: church member registration and transfer system**

## THE FUNCTION REQUIREMENTS

This system was working in two phases where the first phase was happening at the time of Christian's wish to change the cell to another cell but all those cells belong to the same parish, here the involvement of the parish will not be needed.

The second phase will occur when the Christian wish to change the cell to another cell but the destination cell belong to the parish which is different from the formal parish here the involvement of both parish will be needed.

The system should contribute to delete the christian who no longer member of formal church.

The system should help the user to search for quick access to services.

The system should update the services where it needed.

The system should help the admin to approve the request.

The system should help the user to request the transfer.

the system should help Christian to applies the membership transfer to the formal cell.

the system should help the formal cell to receives the Christian's application and views the application.

the system should help the formal cell checks the if the requirements are fulfilled and check Christian's status.

the system should help If the requirements are insufficient or the status is not clear application is returned back to Christian.

If the requirements and the status are fulfilled the formal cell will send Christian's application to the destination cell in the same parish where the Christian wishes to relocate.

the system should help to record all the necessary information of Christian.

the system should help the destination cell approves and admits the new Christian.

the system should help: the destination cell to send the response to the Christian

the system should help the Christian receives the response from the destination cell.

the system should help Christian applies the membership transfer to the formal cell.

the system should help the formal cell to receives the Christian's application and views the application.

the system should help the formal cell checks if the requirements are fulfilled and check Christian's status.

If the requirements are insufficient or the status is not clear application is returned to Christian.

If the requirements and the status are fulfilled the formal cell will send the Christian's application to the formal parish where the Christian was belong.

the system should help the formal parish receives and approves the application.

the system should help the formal parish sends the recommendation to the destination parish.

the system should help the destination parish to receives the recommendation.

the system should help the destination parish approves the recommendation.

the system should help the destination parish sends the recommendation to the destination cell.

the system should help the destination to receives the recommendation for a new Christian from the parish.

the system should help the destination cell to confirms the new Christian.

the system should help the destination cell to sends the response to the Christian.

the system should help christian to receive the response.

## **NON FUNCTION REQUIREMENT FOR THE SYSTEM.**

Learnability

## **PART II**

### **PROBLEMS WITH THE CURRENT SYSTEM**

#### **Performance**

##### **Throughput**

- Lengthy processing time: A problem faced by ADEPR in terms of membership transfer is the lengthy processing time required to complete the transfer. This can cause frustration among members who may need to transfer urgently, leading to dissatisfaction with the church's services.

##### **Response time**

- Inefficiency in communication: ADEPR may be facing challenges in communicating membership transfer requests effectively and efficiently between different branches or regions. This may lead to delays in response time, as requests may not be processed in a timely manner.
- Lack of standardized procedures: ADEPR may not have standardized procedures in place for handling membership transfer requests, which can cause confusion and delays. For instance, different branches or regions may have different processes for handling membership transfers, resulting in inconsistencies and delays.
- Limited technological infrastructure: ADEPR may have limited technological infrastructure to support the efficient transfer of membership data between branches or regions. This may include outdated software systems or limited access to reliable internet connections, which can slow down the processing of membership transfer requests.

## **Information**

**Input:** Paper-based system: A paper-based system can be time-consuming and prone to errors due to manual data entry.

**Output:** ADEPR's current system for transferring members from one church to another is inefficient and ineffective, leading to delayed and inaccurate information output.

**Storage:** The current process relies on manual record-keeping, which is prone to errors and can result in lost or misplaced records.

## **Economics**

The System cost the Christian the transport and Airtime to access the church elders.

## **Control**

The current system may involve manual processes, which can be time-consuming and prone to errors. Without proper controls, there may be inconsistencies in how membership transfer services are scheduled, managed, and recorded.

## **Efficiency**

Current system is not efficient for: pastors, Church elders, and Christians. therefore, it needs improvement.

## **IMPLIMENTATION OF THE SYSTEM**

This system is implemented by using

- ❖ Spring Boot application and Spring mvc framework
- ❖ Model
- ❖ View
- ❖ Controller
- ❖ Repository
- ❖ Thymeleaf

- ❖ Bootstrap
- ❖ Html
- ❖ Css
- ❖ Hibernate

## **FRAMEWORKS**

- ❖ Spring Jpaframework
- ❖ Spring mvc framework

## **DATABASE USED IS**

- ❖ MYSQL (xampp)

## **CODE EDITOR USED**

- ❖ Visual studio code.

## **LIBRARIES THAT USED**

## **DEPENDANCES**

- ❖ Spring devtool for refreshing server
- ❖ MySQL for the database
- ❖ Spring web for interaction with the web-pages
- ❖ Spring email for sending email to the user
- ❖ Thymeleaf for displaying data from database
- ❖ Spring jpa for working together with the MySQL to take data to database

## **THE SYSTEM IS HAVING TWO DASHBOARD**

**1 admin dashboard (localhost:8000/admin)**

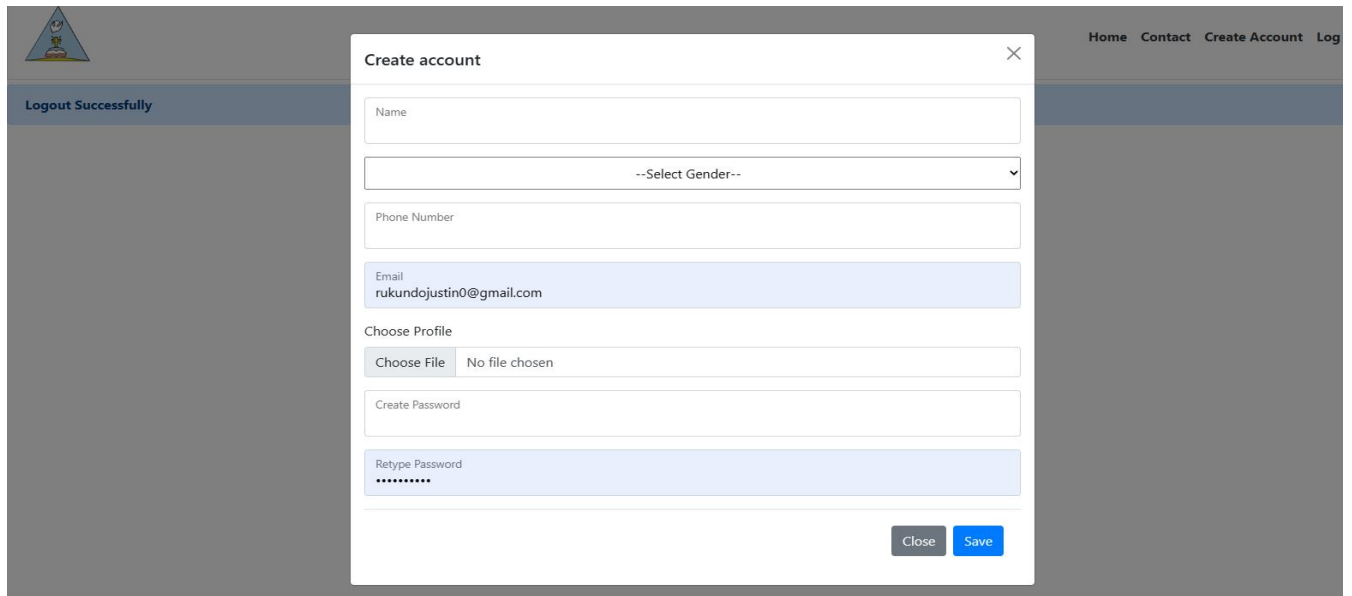

**2 user dashboard (localhost:8000)**

## **LIST OF ABBREVIATION**

- ❖ **CSS :Cascading Style Sheet**
- ❖ **HTML: hyper text markup language**
- ❖ **MVC: Model View Controller**

LET START WITH VALIDATION AND AUTHENTICATION.

IN CREATE ACCOUNT THE USER WILL ALSO APLOAD HIS PHOTO

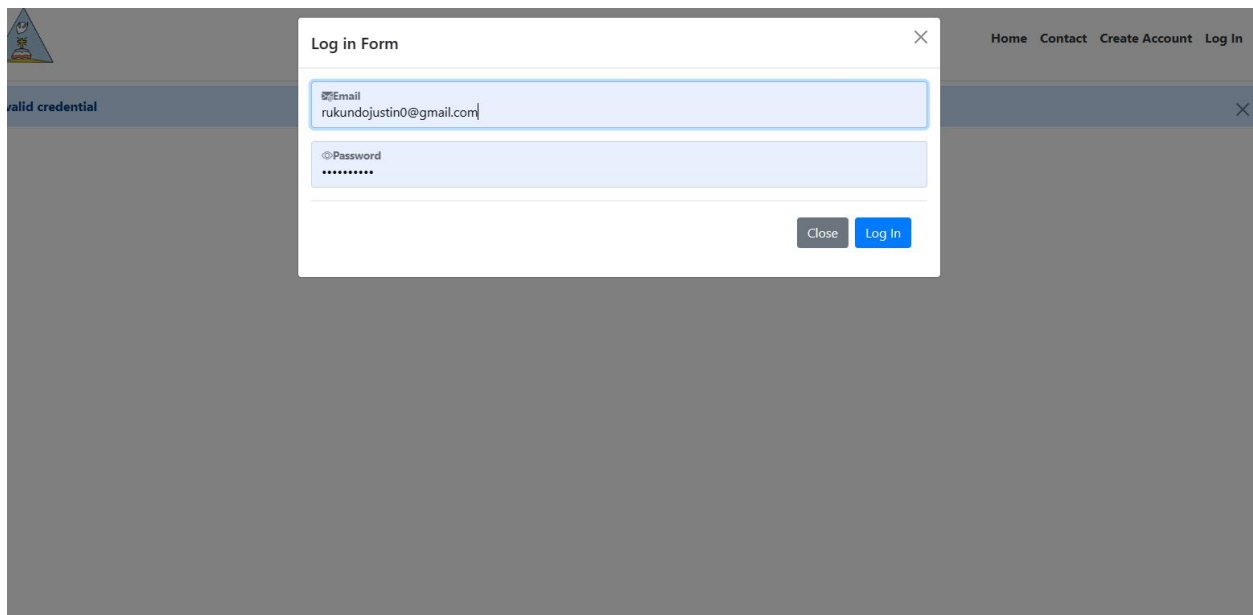

The screenshot shows a web application interface with a dark grey background. In the top left corner, there is a small logo of a person inside a triangle. A blue banner at the top left displays the text "Logout Successfully". In the top right corner, there is a navigation menu with links: "Home", "Contact", "Create Account", and "Log In". A white modal window titled "Create account" is centered on the screen. It contains the following fields: a text input for "Name", a dropdown menu for "--Select Gender--", a text input for "Phone Number", a text input for "Email" containing "rukundojustin0@gmail.com", a "Choose Profile" section with a "Choose File" button and the text "No file chosen", a text input for "Create Password", and a text input for "Retype Password" containing "\*\*\*\*\*". At the bottom right of the modal are two buttons: "Close" and "Save".

2. LOGIN PAGE

3. USER LOGIN AS USER WITH EMAIL AND INCRIPTED PASSWORD

NB. IF YOU WANT TO LOGIN AS ADMIN YOU WRITE IN BROWSER localhost:8000/admin

The screenshot shows the same web application interface as the first image. A blue banner at the top left now displays the text "Invalid credential". The "Log in Form" modal is open, showing the "Email" field with "rukundojustin0@gmail.com" and the "Password" field with "\*\*\*\*\*". The "Log In" button is highlighted in blue. The "Close" button is also visible.
